

Software Engineer – Game Team

Us in a nutshell

Mightier is a video games platform and coaching program that helps children with emotional regulation challenges such as ADHD and Anxiety. We are pioneering a new area of gameplay. Founded out of Harvard Medical School and Boston Children's Hospital, the science has been shown as effective as medication in multiple clinical trials. Mightier has been used by thousands of kids across the globe.

Mightier is developed by a small and devoted team in Boston, Massachusetts. As a team, we care deeply about our players and their families. We are looking for talented, passionate, and creative people to help move Mightier forward.

Why is this role important?

Mightier grows everyday and we are looking for someone to help solve our advanced technical hurdles. As a part of the tech team, your duties would include everything from managing a unity project with 20+ games to platform wide meta-game integration. Help us build something that works and runs great.

Job description

- Product development: be part of a small team where you will have a big impact on all aspects of product development.
- Build foundational features: you'll need to balance product/design initiatives with maintaining the integrity and quality of the game experience. A few projects on the horizon:
 - Help prototype and implement core gameplay
 - Deep game mechanic integrations with Mightier heart rate monitor
 - Localization for several of our existing games
 - Help maintain an application with over 25 games in it

Relevant experience and qualifications

- Bachelor's Degree in Computer Science or equivalent demonstrated experience.
- Previous engineering experience at game development studio.
- At least one shipped title.
- Familiarity with mobile application development or Unity development
- Ability to set up systems that ensure a high-quality end product. With a sense of long term / maintainable code.
- Strong competency in at least one programming language and sound knowledge of software engineering principles, i.e. object-oriented design, algorithmic complexity, and software design patterns.
- Familiar with development lifecycle out to Google & Apple app stores
- Familiar with agile development methodologies and iterative design.
- Familiar with GIT or similar version control software
- Willingness to participate in a culture of feedback and collaboration.
- Direct collaboration with QA (Quality Assurance) teams

Join Us!

- We will consider candidates seeking both full-time opportunities.
- Send your resume and cover letter as attachments to talent@mightier.com with "Software Engineer" as the subject line. We can't wait to hear from you!
